Project Title	iLet4You Internal
Client	iLet4You Limited – C/O Mohammed Rawais
Deliverable	Internal CRM System.

1. Project Description

- Create a web based CRM for an estate agents. This system must allow the users to quickly access important customer information. The specifics are as follows:
- Home interface which leads off to multiple sections such as quick links or desktop applications such as Whatsapp – Excel Etc
- Have an interface where you can search for client name and or property address.
- Once an address has been selected it should show information on different tabs such as the landlords information such as phone number, address etc – tenant details – file system for the property (windows link within) – Ability to note things against tenant and landlord which must be able to be retained with date/time.
- Have functionality for being able to bring up a table containing key dates with the corresponding properties.
- Allow the user to create a new property and tenant
- Have a visually appealing UI

*Advanced (Not essential):

- Have a way to retain previous tenant details and notes.
- Have a way to backup the system to mitigate data loss.

2. Business Requirements and the Scope

iLet4You is an estate agents which currently requires and inhouse CRM to replace the current systems as its deemed to be inefficient due to multiple files being in different locations.

The main requirements and the scope are as follows:

2.1.1 Login

A secure login system (passwords for users must not be in plaintext rather MD5 or equivalent) must be provided to ensure that the customers' data is safe.

2.1.2 Products

They should be able to rather than relying on multiple excel documents be able to merge the details into a single platform to save time. The search facility must be able to search by details such as the landlord name, the address of the property, the tenant name or even a contact number.

2.1.3 Important Dates Section

Within one of the tabs there should be an ability to add important dates which can be amended by the user for the following situations:

- Gas Certificate Due Date:
- Electric Certificate Due Date:
- EPC Due Date:
- ID verification expiry Due Date:

*Not essential; be able to pull a monthly report that appends this information on to a sheet which can be exported to be printed or PDF.

3. Technical Requirements

The system should be developed as a web based application. The application should be optimized for speed and not be bloated with large sized graphics..

Must be able to have multiple people securely logged in at once.

4. Other Generic Requirements

This project involves developing a new application, and it is of utmost importance that you clarify the requirements with the client during your sessions.
